Hacker Strategy: First Antivirus, Then Theft

1. Protected System
2. Disabling Antivirus
3. Theft and Destruction

The enemy must target ‘Security Shields’ first. Just like a hacker who disables your firewall before stealing data,the enemy first neutralizes the guardians of security to pave the way for destruction.

What is the Security Shield?

1. **Psychological and Financial:** Trust in the economic system.
2. **Physical:** Presence of Police and order-keeping forces.

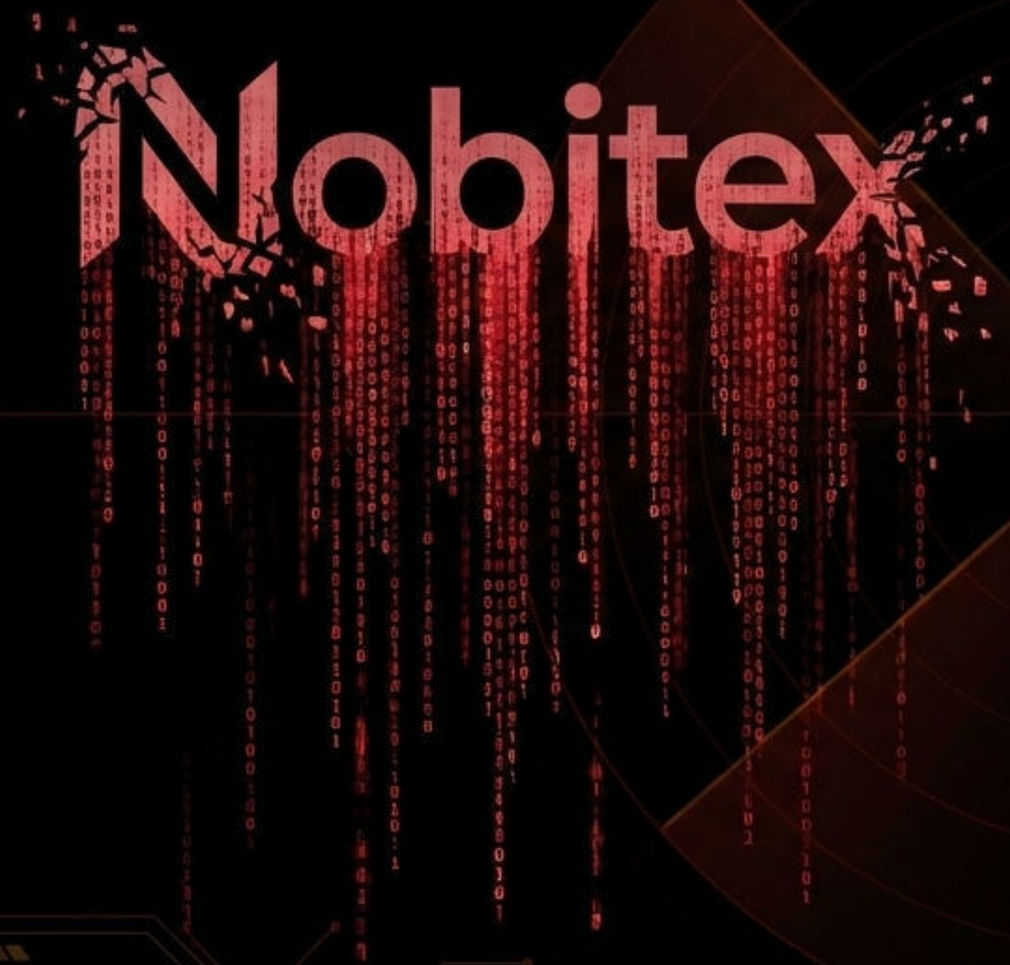
The ultimate goal of the enemy is complete destruction at a low cost. If the security shield is broken, society collapses from within.

12-Day War: Enemy's Operational Laboratory

June 23 to July 3, 1404

In June 1404, simultaneous with the air and missile attacks by the Zionist regime (Operation Lion's Dawn), a precise and coordinated scenario was executed.

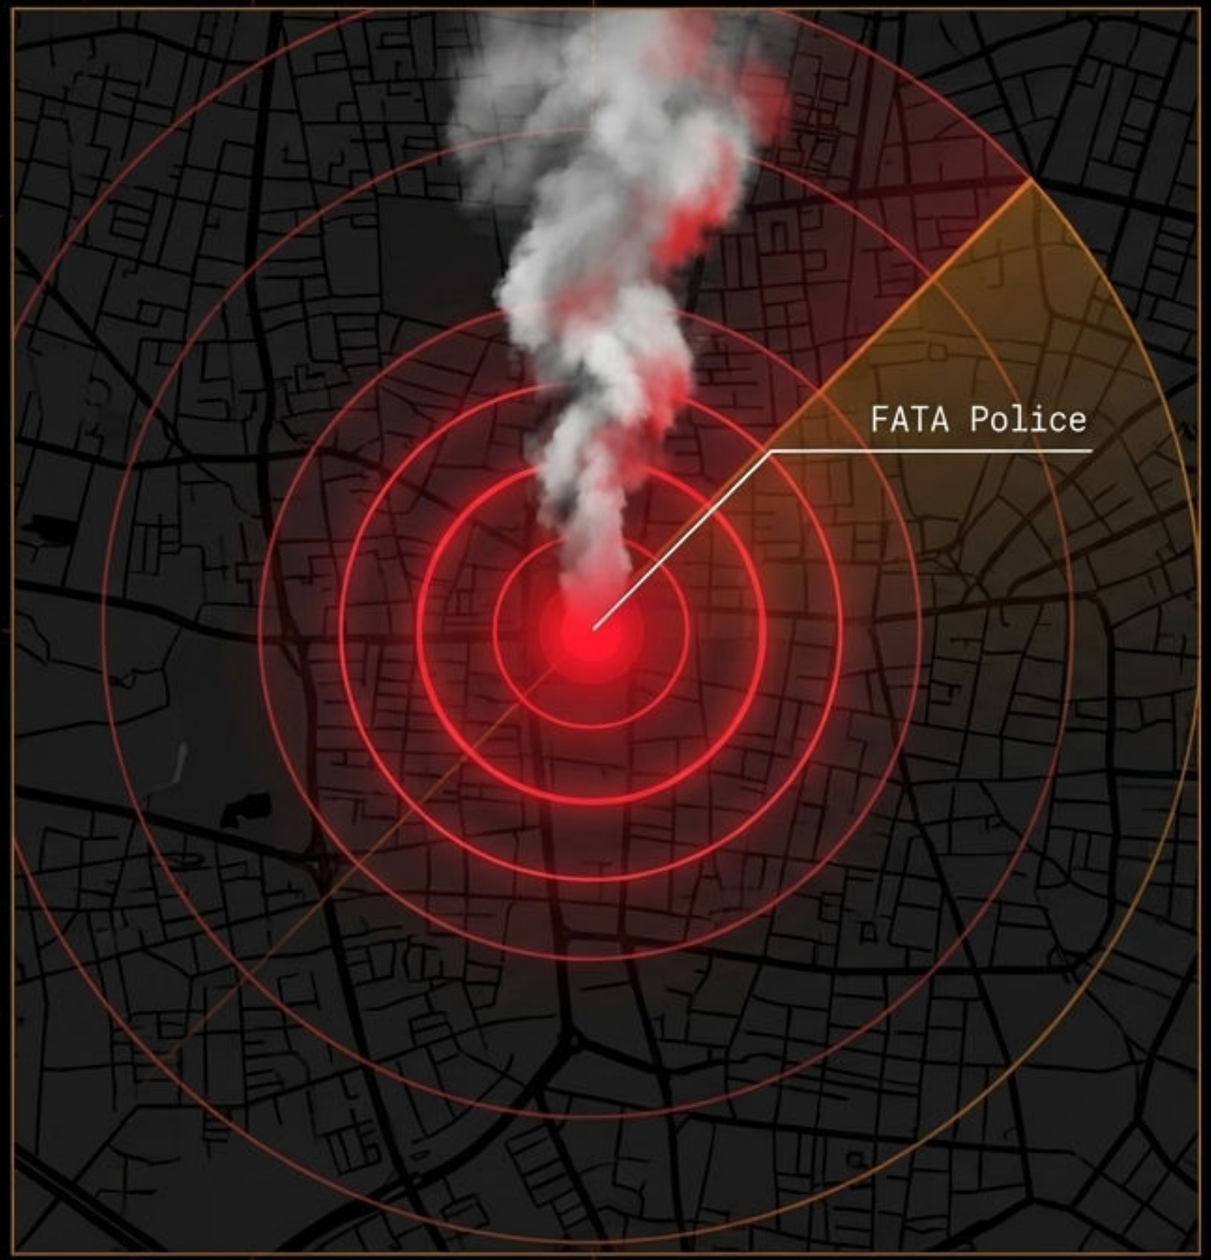
Timeframe: June 23 to July 3, 1404
Target: Simultaneous paralysis of economy and security
Tactic: Cyber-Kinetic hybrid attack



First Front: Attack on People's Assets (Nobitex)

During the precise days of war when people were worried about their homes, Iran's largest cryptocurrency exchange was targeted by a highly complex cyber attack (by the Sparrowhawk group).

- **Target Audience:** 11 million Iranian users (1 in 10 Iranians).
- **Enemy Claim:** Theft of $90 million (designed to create financial terror).
- **Hidden Goal:** Creating public dissatisfaction and a sense of absolute insecurity during wartime.



Blinding the Eye of Security (FATA Police): Second Front

Simultaneous with the Nobitex hack, the FATA Police building on Motahari Street was targeted by an airstrike.

Strategic Analysis

Metadata: Intelligence: Tehran "CR.T
Primary Analysis: HUD | Target

Why FATA? This was not random. The enemy precisely targeted the structural entity responsible for fighting hackers and restoring cyber security.

Matching the Theory: This is the literal equivalent of disabling the 'Antivirus' (the police) to ensure the completion of the 'Theft' (the hack).

Pincer Maneuver: When the Shelter is Not Safe

The enemy's strategy was to force a psychological deadlock. On one side, people's money was stolen from the exchange, making them furious. On the other side, the police building was destroyed so people felt they had no shelter.

"They wanted to prevent security from returning to the people."

Failure of the Project with Honor and Courage

Despite the missile attacks on Tehran, the enemy's calculations proved false.

[Nobitex]

Technical support teams returned to their posts under the shadow of war to protect the people’s assets.

[FATA Police]

FATA police and security forces rapidly repaired the structure and re-established security.

Result: The people’s money was saved, security returned, and the ‘Chaos’ project failed.

Dey 1404: Repeating the Scenario with New Tools

June 1404

Dey 1404

The events of 18 and 19 Dey 1404 are the exact continuation of the 12-Day War. It is the exact same think tank; only the execution method has changed.

The enemy is once again trying to disable the ‘Security Shield’.

Economic Sanctions: A Virus to Weaken the System

- **Tactic:** Applying the most severe economic sanctions on Great Iran.
- **Goal:** Creating intense livelihood pressure on the population (replicating the asset theft of Nobitex).
- **Role of Sanctions:** This "virus" is designed to slowly degrade the defensive walls of society (public resilience) so the system weakens.

The enemy is once again trying to disable the "Security Shield".

Infiltration in Protests: Activating Malware

When protests form due to economic pressures, the enemy sends their mercenaries (‘Infiltrators/Malware’) into the crowds of youth.

Execution sequence:

1. Provoking the emotions of the youth.
2. Destroying public property and instigating false-flag killings.
3. Ultimate Goal: Transforming a legitimate protest (the people’s right) into a destructive riot (the enemy’s weapon).

Retargeting the Guardians of Security

During the events of Dey, the tip of the spear was aimed directly at the police and mobilization forces.

Eliminating Police with a Missile

≈

Eliminating Police with Riots

- The enemy knows that as long as the “Police” (Antivirus) is active, they cannot destroy the city.
- Therefore, through media propaganda and street violence, they attempt to violently remove the security shield.

The enemy is once again trying to disable the “Security Shield”

Matching Patterns: One Think Tank, Two Battlefields

Phases	12-Day War (June)	Dey 1404
Stage 1 - Infiltration	Nobitex Cyber Hack	Economic Sanctions
Stage 2 - Removing Antivirus	Bombing FATA Building	Attacking Police in the Streets
Stage 3 - Ultimate Goal	Creating Insecurity & Chaos	Syrization & Destruction of the City
Result	Failed (Due to People's Resistance)	? (Depends on our Vigilance)

Vigilance: The Strongest Antivirus

During the 12-day war, the courage of the forces and the patience of the people neutralized the plot. Today, we must update our defenses:

1. **Recognize the enemy's scenario** (Understand the Hacker Pattern).
2. **Maintain calm and separate ranks from mercenaries.**
3. **Actively support the guardians of security.**

Security is not an accident; it is the result of collective vigilance.

Sustainable Security in the Shadow of Insight

The people’s calm and the Police’s dedication are the secret to the return of security.
